

## Conditions

### 1-2-1 Products Ltd & Snakeprofessional

HexArmor Hercules™ 3180 R8E (also referred to as Ultra Point Guard 3180 and 'Venom Defender Animal Handling Gloves') are designed to serve as an additional layer of protection for users engaging in activities that involve potentially dangerous animals. However, these gloves are not intended as a substitute for good animal handling techniques.

Venom Defender Animal Handling Gloves are ultimately not designed for this purpose and service life cannot be specified as this depends on application and responsibility of the user to ascertain suitability of the product for its intended use.

Whilst Venom Defender Animal Handling Gloves are needlestick-, puncture-, and cut-resistant due to their construction with 3 and 2 layers of 3180 R8E SuperFabric® material technology, they are not guaranteed to be needlestick-, puncture-, or cut-proof.

These gloves are engineered to provide the highest level of needle stick resistance on the market, meeting ANSI/ISEA 105-216 standards;

- 3 layers of 3180 R8E SuperFabric®: Level 5 needle stick resistance.
- 2 layers of 3180 R8E SuperFabric®: Level 2 needle stick resistance.
- 3 layers of 3180 R8E SuperFabric®: Level 3 puncture resistance.
- 2 layers of 3180 R8E SuperFabric®: Level 2 puncture resistance.
- 3 layers of 3180 R8E SuperFabric®: Level A9 cut resistance.
- 2 layers of 3180 R8E SuperFabric®: Level A8 cut resistance.

These gloves provide 3 layers 3180 R8E SuperFabric® of coverage for the palm, back of the hand, top and bottom of the fingers, and forearm.

However, the sides of the fingers have 2 layers of 3180 R8E SuperFabric®

### Key Usage Warnings

1. For Trained Experts Only: Handling venomous snakes, stingrays, or other dangerous animals which are capable of causing injuries through venom, poison, or strong bites, should only be attempted by trained professionals who accept full responsibility for their actions. These gloves are intended as a secondary layer of defence and should not replace proper handling techniques.

2. Not Guaranteed Against Injuries: While offering high levels of protection, these gloves are not guaranteed to prevent injuries caused by bites, scratches, or penetration, particularly in situations involving high forces or direct impacts. Direct impacts with significant force may penetrate the gloves. These gloves are intended to prevent injuries, and/or to mitigate the severity of any injuries.
3. Inspect for Damage: Regularly inspect the gloves for wear or damage. When gloves are damaged we strongly recommend that these should be replaced, as compromised gloves may no longer provide adequate protection. Wear & Tear is not an option when dealing with dangerous animals.
4. Service Life and Limitations: These gloves are not designed for indefinite use or specific service life. Suitability for application must be determined by the user.
5. Due to the nature of the applications we cannot accept returns.

#### Product Care and Storage

- Store these gloves in dry conditions, not exposed to sunlight and in their original packaging.
- Machine washable at a short 30°C cycle - drying time is 8–10 hours.
- These gloves are not waterproof.

By using these gloves, users acknowledge their understanding of these limitations and assume full responsibility for their handling activities. Always prioritize safety, proper training, and professional guidance when working with potentially dangerous animals.

Herewith I accept the conditions, as described in this 2-page form.
