A BRAND WITH A STORY

Senses 2.0 Play Circuit

To keep your cat interested, you need to change their toy set-up often.

The Senses 2.0 Circuits can be built and rebuilt into different shapes around the house. Surprise your cat with a new layout every few days to keep the experience fresh and exciting!

Peek-a-boo Design for Hunters

Each circuit consists of a ball that zips around a closed track in rollercoaster fashion. The special peek-a-boo cover stimulates cats to chase and swat the ball, which quickly adds up to hours of entertainment!

New straight track enables compatibility with Senses 2.0

The new circuits include a **straight track** that allows compatibility with the wider, more stable Senses 2.0 product bases. This expansion adds **a lot of variety** and can even be **combined with the classic blue circuits**!

Easy to Assemble

Assembling the circuits is very straightforward - simply line up two joints and press down until you hear a soft click. To disassemble, push back the tabs on either ends and pull. The covers can be removed in similar fashion.

COMPATIBILITY WITH SENSES 2.0

The background of the entire image is a repeating pattern of green circuit traces. These traces are thin, double-lined, and form various shapes such as loops, curves, and straight segments, resembling a complex circuit board layout.
